

Tell us, what do you hope to learn during this experience with us?

As an intern for the PwC Switzerland Job Simulation Program on Forage, I am excited to learn and grow in different key areas:

I am excited to learn how Power BI can be applied to analyze and chart data in ways that can support the making of wise decisions and improve business processes. I am most excited, however, to learn how data visualization, machine learning, and automation can further benefit efficiency and business innovation. I also expect to learn how to create bots and automate tasks, which will help optimize operations and support our expansion.

I look forward to applying my theoretical capabilities to actual business problems and figuring out how to create workable solutions. As a member of PwC, I am excited about learning the world of consulting and being able to grasp the role that data plays in decision-making. Lastly, I hope that this experience will provide me with essential soft skills like communication, time management, and critical thinking. I hope that this program will provide an all-around learning experience and I am excited to embark on this journey.
